Re: EPA letter dated April 29th, 2010

Dear Ms Simon

AECOM has been retained to provide geotechnical engineering services for this project. The scope of their work includes the radiological screening of the soils borings, drilling four probes in the alley, surface screening of the alley and former driveway area.

The work above is scheduled to start May 24th, 2010.

We contacted Kimberly Marshal at the ATT custom work order center (888 521 3740) when we had the phone lines removed from the existing building. I have no knowledge of ATT's plan for providing service to the project.

Sincerely

David D. Gutierrez
